

# CASH360®

CASH360 combines currency recycling technology with global cash cycle software to reduce cash handling and management costs. By simplifying operations through end-to-end control of receipts, reduced cash counting and streamlined reconciliation, the coin and currency in the device is “bank owned” cash.

CASH360 improves retail cash cycle by removing excess cash from stores, which enhances cash flow and improves working capital. Retailers benefit from significant cost reduction opportunities via the elimination of dedicated resources for performing deposit preparation, or reductions in armored carrier expenses. CASH360 also provides retailers the opportunity to re-deploy those resources to performing core deliverables for the business — such as customer-facing services.

## Customized to fit your specific needs

Deployed in thousands of retail locations, the CASH360 cash management solution can be tailored to fit the diversity of retailer's requirements, such as different store sizes and business objectives, with users including big box retailers, airport retail operations, gaming and resort retail operations and grocers.

By combining the best in class in-store technology with our global cash cycle software, CASH360 delivers:

- Provisional Credit
- Better cash flow
- Simplified operations
- Highly secure environment
- Reduction in losses

## Create efficiencies while cutting costs

Thousands of retail organizations on four continents and across diverse market sectors use CASH360. They have reported in-store costs cut by up to 70 percent, “shrinkage” losses eliminated, greatly simplified operations, better cash flow, improved management information and best of all — time bought back to spend on their front line customer-facing services.
