

## KILLEEN AIRPORT

# G4S SECURE INTEGRATION UPGRADES SECURITY FOR THE TEXAS AIRPORT WHILE CREATING JOBS IN THE COMMUNITY

The Killeen-Fort Hood Regional Airport is centrally located in the heart of Texas, adjacent to Fort Hood. The airport offers direct, non-stop air access to Dallas / Fort Worth, Houston and Atlanta airports and provides an essential transportation link to the military personnel at Fort Hood.

When the airport was seeking to replace their original, non-integrated access control and monitoring system that was implemented when the airport was built in 2004, they called upon the expertise and experience of G4S Secure Integration.

G4S Secure Integration was not only able to answer their call for the "best-value option" for an integrated access control and video management system, they were able to offer the airport much more. The \$1.8M contract included a command and control center, AMAG Symmetry access control, integration with the city's existing Milestone video management system and a five year maintenance agreement. The result of these upgrades for Killeen Airport is a system that clearly sets it apart from other similarly sized airports in terms of situational awareness.

"What separated us from our competitors was the fact that we self-perform the technical work and that we executed the project utilizing Texas-based employees. In other words, keeping jobs in the Killeen community," said Kyle Hildebrand, former Business Development Director, G4S Secure Integration. "This was over and above the fact that we provided a superior technical solution that was competitively priced."

"With the growth both in the facility and demand of Killeen-Fort Hood Airport over the past ten years, we had quickly outgrown

our current system and had to address the change in security requirements and technology advances that surpassed our current system's capabilities," stated Van Valkenburg, Killeen Airport. "Thanks to the experience of G4S Secure Integration, we'll now have a command and control center with integrated access control and video management that will provide total safety and protection."
